CONCLUSION

Developing the 'Integrated HR and task Management System' with PHP and MySQL has been an instructive experience, showcasing the versatility of modern web development. This system, constructed using React for the front-end, HTML, and CSS, and MySQL for the database, adeptly caters to the unique roles of admin, HR, project manager, and employee, streamlining the complexities of employee management. It seamlessly captures and organizes crucial data, including employee evaluations and salary records, providing a comprehensive and efficient solution. This project underscores PHP power in creating user-friendly applications tailored to real-world organizational requirements, making it a rewarding endeavor in the realm of web development.
